

## J2SE Interview Questions and Answers

I want to change the position of button's when i execute/run the programe.

No Accepted answer found .... [View Answer](#)

Ok, on occassion my computer crashes (joy). The good thing is that it is not Vista, its XP. There is hope.

-  
The problem is my computer will crash suddenly and send one of the messages to Microsoft and say "One of your drivers is screwy."

Thanks, that helped a lot.

-  
So I've been sitting here and they have become more often. I thought maybe it was just a phase. Nope, still here. Well, I was living with it and I noticed a pattern: it crashes during installation or uninstallation. Jeeze, isn't that weird?

-  
Not only that, but specifically with Qtrax install. The program doesn't work (error 1066 registration) so I've been installing and uninstalling. I loaded it and got a Java problem. So I uninstalled java (crash) and reinstalled it (crash). Still doesn't work, so I try to remove and crash. I start my computer again and it says I can't uninstall Java or J2SE. "Fatal error occurred during install."

-  
I'm no idiot at computers, nor am I a genius. So I guess what I'm saying is:

SOS

Answer :: I think it is the Registry corruption; kinda bad luck, Windows XP needs reinstalled. .... [Read More](#)

I just downloaded limewire and went to open it and it simply instructed me to download java....downloaded java 100% successfully when all of a sudden it states that there was an error...and mentions that it may be that I have that activex control thing on the top of my screen(which wasn't there!) so for s.a.g I downloaded active xcontrol and still that java won't download,please help!!!!....I'd even let someone remotely help,what's the deal? please be thorough! thanks!

-  
We encountered an issue while trying to automatically install Java software onto your machine.

-  
If you encounter an error, check the top of the browser (see image above) for a yellow bar that reads "This site might require the following ActiveX control: J2SE Runtime Environment 6 Update 3 from 'Sun Microsystems, Inc.'. Click here to install..." Click the yellow bar and choose "Install ActiveX Control..." to allow installation to proceed

Answer :: Run as Administrator .... [Read More](#)

well i tried to go on lime wire and it said i need java 5.0 or above, i have java 5.0. i tried to update my java to 6.3 but it said error applying transforms. I tried to reinstall java. i uninstalled both of my J2SE runtime environment 5 updates, then i reset my comp, then i tried downloading java and it said again error applying transforms. wtf is wrong? i tried everything,

and nothing works. now i have no java updates on my comp....

-  
thank you for any help

Answer :: If you have windows vista then do a restore point and leave your java software alone. Limewire is illegal anyway and you could get caught and fined a lot of money. I wouldnt risk it. .... [Read More](#)

i have java downloads:

-  
J2SE Runtime Environment 5.0 Update 11

Java 2 Runtime Environment, SE v1.4.2

Java(TM) 6 Update 7

Java(TM) SE Runtime Environment 6 Update 1

-  
my main question is do i need all of them... and if not which can i delete...

i don't do any programing or anything... this is just for playing games here and there... nothing like World of Warcraft and its for just browsing the internet... saying that for just incase some of those are specific for some stuff...

Answer :: Keep these two:

Java(TM) 6 Update 7

Java(TM) SE Runtime Environment 6 Update 1

.... [Read More](#)

I recently downloaded Java 6 update 7 update, and was suggested to delete the older versions of Java. So, I went in Add/Remove programs and saw a bunch of different versions. I'm not sure which ones to delete so can someone help me?

Here are the ones listed in order:

-  
J2SE Runtime Environment 5.0 Update 3

Java 2 Runtime Environment, SE v1.4.2\_03

Java(TM) 6 Update 3

Java(TM) 6 Update 7

Java(TM) SE Runtime Environment 6 Update 1

-  
Can someone tell which ones to delete? Also, what's the difference between the Updates and Runtime Environment Updates? Do I need both kinds?

Answer :: Click on each one in the Add/Remove program and look on the right side of the box and any ones that say "rarely used", delete it. The one your computer uses most, keep. .... [Read More](#)

I completed Master of IT, I donot have any work experience, though I done many project in my studies, and I am good in programming, I completed SCJP. My skills PHP,J2SE,C++, Mysql. I am a international student, applied for TR - 485.

&lt;a href="http://users.erols.com/ziring/spir... src="http://users.erols.com/ziring/spiro... width=64 height=64 border=2 vspace=5 hspace=20&gt;&lt;/a&gt;

&lt;a href="http://users.erols.com/ziring/spir... src="http://users.erols.com/ziring/spiro... width=64 height=64 border=2 vspace=5 hspace=20&gt;&lt;/a&gt;

&lt;/center&gt;

&lt;h3&gt;Background Information&lt;/h3&gt;

&lt;ul&gt;

The Spiro applet is an attempt to offer a fairly serious tool for creating a certain kind of graphic, while keeping things reasonably simple and portable.

Written for Java 1.1, the Spiro applet has been tested and found to work on the following platforms:

&lt;ul&gt;

&lt;li&gt;Netscape Communicator 4.06, Windows 98

&lt;li&gt;MS Internet Explorer 4.01, Windows 98

&lt;li&gt;Netscape Communicator 4.73, Windows 98

&lt;li&gt;Netscape Communicator 4.72, Windows NT

&lt;li&gt;MS Internet Explorer 5.0, Windows NT

&lt;li&gt;MS Internet Explorer 5.0, MacOS

&lt;/li>&lt;a href="http://www.zirong.com/links/links.html" &gt;Netscape Communicator 4.72, RedHat Linux 6.1

&lt;/li>&lt;a href="http://www.zirong.com/links/links.html" &gt;Netscape Communicator 4.72, Solaris 8

&lt;/ul>

-  
The applet will not work in versions of Netscape older than 4.02, nor will it work in versions of MSIE older than 4.0. Also, the applet does not seem to work in many versions of Netscape on the Macintosh (not sure why yet).

-  
Unlike most art-creation applets on the web, the Spiro applet allows you to save your work! Normally, saving your work locally from an applet is difficult, because Java security restrictions prevent applets from creating local files. The Spiro applet sidesteps Java's security restrictions by means of a small server-side CGI system that 'reflects' the applet-created image back to the web browser.

&lt;/ul>

-  
&lt;h3>Running Spiro as an Application&lt;/h3>

&lt;/ul>

-  
For folks that would like to play with the Spiro applet on their own computer, Spiro is also available as a Java application. To run Spiro as an application, you'll need the Sun JDK or JRE, version 1.1.7 or later (1.2.1 or later recommended). The application version of Spiro allows you to save drawing to your local disk as standard Targa (.tga) image files. You can download the Java JAR file for Spiro, and obtain the Sun Java Runtime if you need it, from the links below:

&lt;/ul>

&lt;/li>&lt;a href="http://www.zirong.com/links/spiro.jar" &gt;Spiro 0.98 application: spiro.jar&lt;/a>&lt;/li>

&lt;/li>&lt;a href="http://java.sun.com/j2se/" &gt;Java 2 Platform downloads&lt;/a>&lt;/li>

&lt;/ul>

-  
Once you have the Java Runtime installed, you should be able to run Spiro by typing the command &lt;tt>java -jar spiro.jar&lt;/tt>. (Under MacOS, of course, you can't type commands. Follow the MacOS help for running Java applications.)

-  
The Spiro application is available free of charge, and unencumbered by any warranty or claims of suitability for any particular purpose. Use at your own risk. Source code for Spiro is available on request, email to &lt;i>ziring@home.com&lt;/i>.

[hey people, i'm just beginning to learn java. i know c c++ etc, but nothing about java. my lecturer was taking particles today and my head just started spinning after i herd some weird terms. does java have a compiler just like c? what the heck is JDK, J2SE, JRE or runtime environment, why is java called a stand alone language \(whatever that is\)? pls help, really lost here...](#)

Answer :: JDK = Java Development Kit

This is what you need to actually make java programs

JRE = Java Runtime Environment

This is what you need to run Java programs

There are different Java compilers like Netbeans and Eclipse. Use whichever you like.

Java is a stand-alone language because it's not hardware dependant and was independantly developed by sun microsystems. The exact same java program can run on any machine with the java runtime environment (unlike C or C++ programs which must be compiled for the specific machines they'll be used on). .... Answer :: for java setting-

```
set JAVA_HOME= G:\jdk1.5\
```

```
set PATH=%JAVA_HOME%\bin;%path%
```

```
set CLASSPATH=.;%JAVA_HOME%\lib
```

```
start
```

save on desktop

for tomcat save it on desktop.

```
set JAVA_HOME=G:\jdk1.5
```

```
set CATALINA_HOME=G:\Tomcat5.5
```

```
set PATH=%CATALINA_HOME%\bin;%JAVA_HOME%\bin...
```

```
set CLASSPATH=.;%CATALINA_HOME%\common\lib\s...
```

```
cd %CATALINA_HOME%\webapps
```

```
start
```

i have installed java as well as Tomcat in G: u can install anywhere u want to.  
above are the batch files and make sure u have entered the correct classpath.

Dear instead of c:\java\jre1.6.0\_05

write c:\java1.5

PLZ PLZ DONT USE JDK 1.6 IT HAS HELL LOT OF BUGS JDK 1.5 IS BETTER.

same can be done for tomcat.

need anyhelp mail me

[? Microsoft Windows \(MS Windows 3.1/95/98/2000/XP, MS-Dos – advanced\)\).](#)

Answer :: Break it up into categories

Operating Systems

Computer Languages

Application Software

Databases

edit

You could combine operating systems along with web software to cover your apache question

Not sure what tinyERP is so cannot comment as to what category.

I just suggest you make the categories as narrow or broad as necessary to make your resume look good. Remember, nobody is going to look at your resume and comment on your categories. Just don't make more than 3-4 categories.

The actual job experience is where most of the resume attention (I assume that CV is a UK term for resume) will be.

Networking .... [Read More](#)
