

Sharepoint Interview Questions and Answers

[What is the difference between WPF and Silverlight?](#)

Answer :: Silverlight uses a particular implementation of a XAML parser, with that parser being part of the Silverlight core install. In some cases, the parsing behavior differs from the parsing behavior in Windows Presentation Foundation (WPF), which also has a particular implementation. [Read More](#)

[What are the three factors that are the most important for a team to work effectively?](#)

No Accepted answer found [View Answer](#)

[What do you see as the proper role/mission of...](#)

[...a good \(job title you’re seeking\);](#)

[...a good manager;](#)

[...an executive in serving the community;](#)

[...a leading company in our industry; etc.](#)

Answer :: Think of the most essential ingredients of success for each category above – your job title, your role as manager, your firm’s role, etc.

Identify at least three but no more than six qualities you feel are most important to success in each role. Then commit your response to memory.

Here, again, the more information you’ve already drawn out about the greatest wants and needs of the interviewer, and the more homework you’ve done to identify the culture of the firm, the more on-target your answer will be. [Read More](#)

[What is your highest education level?](#)

[What is the difference between SharePoint Portal Server and Windows SharePoint Services?](#)

Answer :: SharePoint Portal Server is the global portal offering features like global navigation and searching.Windows SharePoint Services is more content management based with document libraries andlists. You apply information to certain areas within your portal from windows sharepoint Services or directly to portal areas. [Read More](#)

[What is Sharepoint?](#)

Answer :: Sharepoint Portal Collaboration Software. Microsoft Office SharePoint Server is an integrated suite of server capabilities that can help improve organizational effectiveness by providing comprehensive content management and enterprise search, accelerating shared business processes, and facilitating information-sharing across boundaries for better business insight. Additionally, this collaboration and content management server provides IT professionals and developers with the platform and tools they need for server administration, application extensibility, and interoperability.

Microsoft SharePoint is a collection of products and software elements that include, amongst a growing selection of components, Internet Explorer based collaboration functions, process management modules, search modules and a document-management platform. SharePoint can be used to host web sites that access shared workspaces, information stores and documents, as well as host defined applications such as wikis and blogs. All users can manipulate proprietary controls called "web parts" or interact with pieces of content such as lists and document libraries.

Sharepoint can be used as

A public facing website

An intranet or extranet

A document management system

A communication platform

A process and workflow platform

A rapid development environment

[Here's the story, I have this report and I am looking for the right word in the following sentence.](#)

["The documents have been uploaded to the company Sharepoint site for your review along with the following information in this report."](#)

[- Note that I've written "along with" the following information in this report. I don't want the reader to think that I have also uploaded the HARD copy of the document, just that the electronic stuff and the paper stuff must be reviewed together.](#)

- Does anyone have an awesome word I could throw in there to make the sentence sound smart and educated. :)

Answer :: in conjunction with [Read More](#)

Obviously I do not need YOU!! to answer as if you were in an interview, but give me some sort of indication of what I should expect to hear or be looking out for would be appreciated

- Describe the process you would go through in order to roll out a software package using both Active Directory and Group Policy.

- Can you explain the function of a firewall?

- Do you have any experience with Microsoft Office SharePoint Server 2007? If so, can you explain how you have used it in the past?

- Can you explain the disaster recovery process that you had in place in a previous position?

- Can you explain the major differences between a switch and hub?

- You are in the office dealing with a damaged staff laptop, when the phone rings. It's an irate user telling you they've run out of printer credit. At the same time one of the servers starts beeping an alarm signal. How do you deal with this situation?

- Describe some form of network documentation you have produced in the past
Any scenario solutions appreciated

Answer :: Use Scotty's from Star treks approach for the second last question, you tell the irate user i'll be there in a minute then you turn all attention to the server problem. No server no internal network=lost revenue for the company. [Read More](#)

We have a welcome page which allows anonymous user's to access it. What we want to do is display a different page of content if the user is logged in, either by a redirect to an alternative page or by displaying the content on the same page. The problem being that if you add a new content editor webpart and use a restricted Target Audience this will force anonymous users to login. I wonder if there is a way round this?

- This is forms authentication website based on Sharepoint 2007...

Answer :: Use php, python, perl or something like that.

These are programming languages which normally generate html. [Read More](#)

An organisation I work with is looking for an online document repository, mainly to keep Word documents that need to be kept updated, but also personal details like names and addresses. If they could also set up alerts, like document review dates, that would be great.

The ideal solution would be something like MS Sharepoint, as they could set up lists to store whatever database-type information they need, but they only have half a dozen users and probably not the network infrastructure to install Sharepoint.

-
Is there an online, ideally free, resource that they could be using?

Answer :: Subversion Server can hold a repository for all the files and handle updates etc. You can download and use for free a server from

`<a href="http://www.visualsvn.com/server/download/"
rel="nofollow">http://www.visualsvn.com/server/download...`

A client is installed locally and several repositories can be configured.
